Pyramid Dashboard Strategy

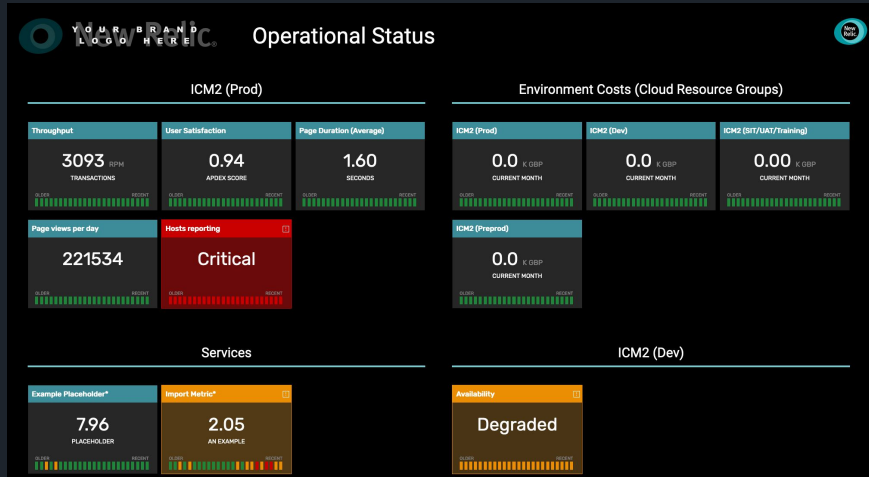

Progressively more detailed and specific dashboards and data views.

How to do it

- Start with a template (see if desired dashboard already exists)
- Duplicate for various dimensions: times, tags, teams, etc.
- Use multiple pages / FACET linking
- Use variables for filtering
- Use Markdown widgets to make dashboards self-documenting

Advanced NRQL

- filter()
- FACET cases
- coercion
- RLIKE / capture()
- aparse()
- Nested aggregation / subqueries
