Step 1

Introduction to Observability and the New Relic Platform

© 2025 New Relic, Inc. All rights reserved.

Observability

“Understanding a system's performance from the data it generates.

It's a practice that enables engineers to quickly analyze system behavior and take proactive measures to boost performance and reliability.

Observability takes the long-established practice of 'monitoring' to a higher degree of insight into your systems.”

Planning your deployment

What to monitor?

- Applications (prod/dev/test/staging)
- Mobile
- Hosts
- Databases

Naming conventions

- App and service naming
- Environments
- 'Roll-up' (group) names
- Tags and labels

Users and access

- Account owner (x1)
- Admins and Users
- Account strategy

Key metrics and data

- Examples: Response time, productivity, MTTR, availability, etc.

Account structure planning: Accounts

Account set up is important. It defines the structure of your observability

- > Accounts contain the data
- > Identified by account ID and name
- > Ingest keys tied to single account
- > Accounts have limits
- > Billing account for usage/billing rollup
- > Users must have access to account to view data within

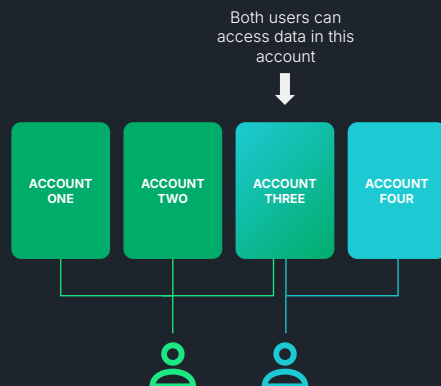

© 2022 New Relic, Inc. All rights reserved.

 new relic

Account structure planning: Account data visibility

- > Users can view data for account if they have access
- > Access is controlled via their groups role/account access grant
- > Users can view all data in the account
- > What users can edit/delete is controlled by their **role**

© 2024 New Relic, Inc. All rights reserved.

 new relic

User roles and permissions

Learn more about setting user roles and permissions

- Account owner (there can be only one)
- Admins
- Users*
- Restricted Users

NOTE: Different types of users may affect access.
If you have questions about account access, contact your
New Relic account team or your account administrator

Resources

 new relic

Step 2 Data ingest and integrations

© 2025 New Relic, Inc. All rights reserved.

 new relic

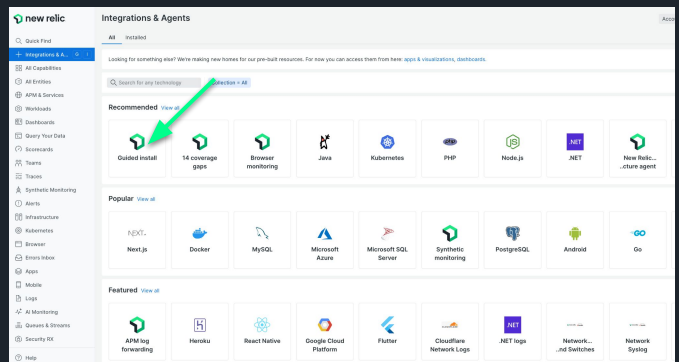

Agent and Integration Landscape

Installing agents and integrations

Follow these steps

1. Go to your New Relic account <https://one.newrelic.com/>
2. Select **Integrations & Agents** menu
3. Options: "Guided Install" installs the Infrastructure agent on your host and automatically instruments applications, logs, services on that host
4. Or choose the technology you want to instrument, follow the steps. Consult documentation for detailed instructions

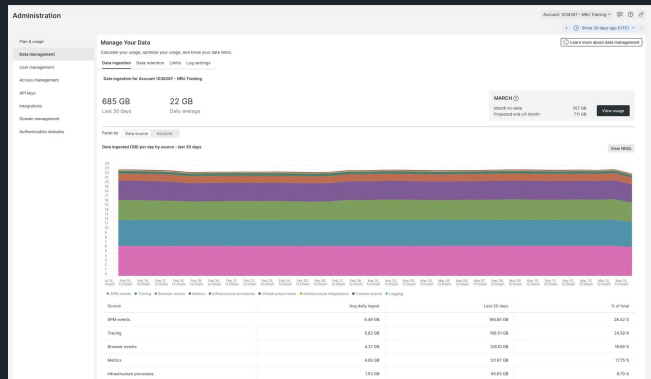

Track your data ingest

Once you start ingesting data you can review and track the different metrics:

Go to 'Account' > 'Manage Your Data'

> [Understand and manage data ingest](#)

> [Optimize ingest](#)

new relic

Platform Capabilities Overview

The following slides provide a reference of each of the core capabilities.

- APM
- Logs
- Infrastructure & Hosts
- Browser
- Synthetics
- Mobile

© 2025 New Relic, Inc. All rights reserved.

APM

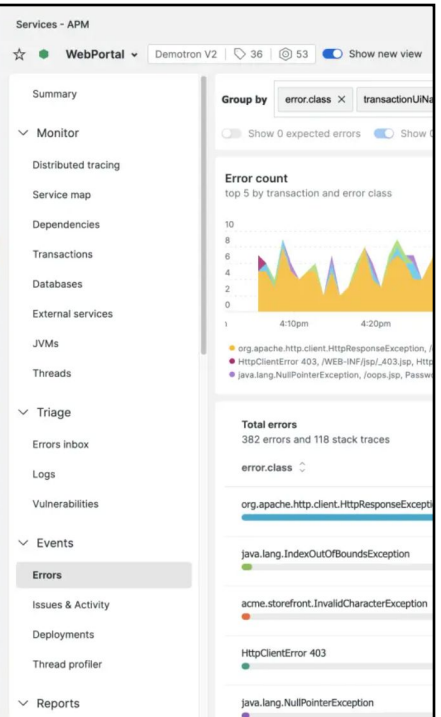

Automatic instrumentation for applications

- Track end-to-end transaction performance with distributed tracing across microservices and dependencies.
- Identify slow database queries, external calls, and code bottlenecks with automated root cause analysis.
- Monitor application health metrics including throughput, response time, error rates, and Apdex scores.
- Troubleshoot production issues with code-level diagnostics and error profiles without impacting performance.

Traces

Entities ▾ Entities 🔍 service.name = Checkout

Trace groups Root entry span Root entity Errors

Plot	Trace name
•	POST /cart/checkout Frontend
•	POST /cart/checkout Frontend
•	POST /cart/checkout Frontend
•	POST /cart/checkout Frontend

Logs

Centralize log data from all sources with automatic parsing and intelligent pattern recognition

- Correlate logs with metrics and traces for faster troubleshooting of complex application issues.
- Search and analyze log data with powerful query language and saved search templates.
- Configure custom log alerts based on patterns, thresholds, or anomalies with direct links to relevant data.

Infrastructure, Hosts and Kubernetes

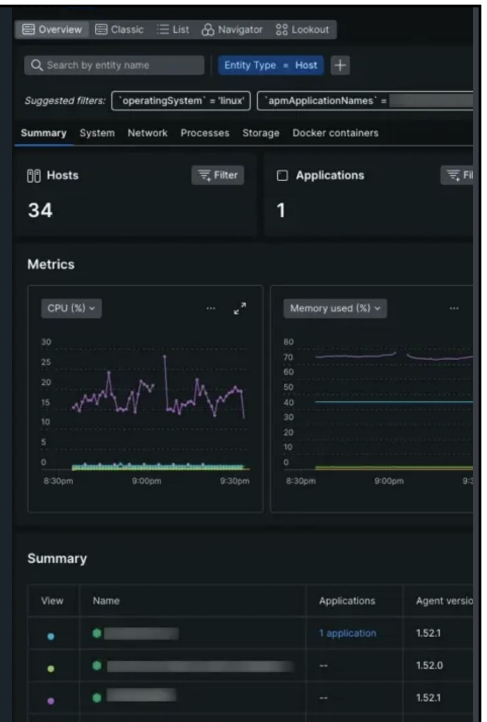

Natively monitor host resources and process metrics

- Create interactive dependency maps showing real-time relationships between hosts, containers, and services.
- Monitor pod health, deployment status, and resource utilization with predefined Kubernetes dashboards.
- Identify unusual infrastructure behavior through AI-powered anomaly detection.
- Correlate infrastructure changes with performance impacts to troubleshoot configuration issues.

Resources

- [Logs - New Relic Documentation](#)
- [New Relic University Course](#)

© 2025 New Relic, Inc. All rights reserved.

Browser

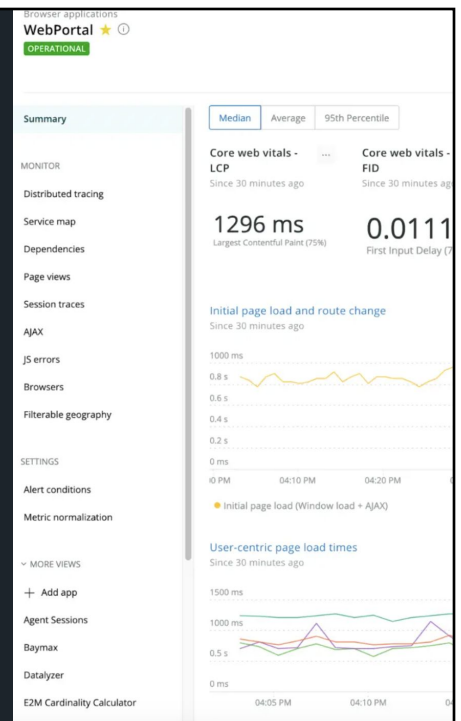

Key capabilities:

- Capture detailed user interactions with page load waterfalls and JavaScript errors across all browsers.
- Monitor SPA performance with specialized tracking for route changes and component rendering times.
- Debug client-side JavaScript errors with full stack traces and user session data.
- Track Core Web Vitals metrics with geographic breakdowns to improve SEO and user experience.
- Analyze and replay customer interactions using Session Replay

Resources

- [Browser - New Relic Documentation](#)
- New Relic University Courses:
 - [Browser](#)
 - [Core Web Vitals](#)

© 2025 New Relic, Inc. All rights reserved.

Mobile

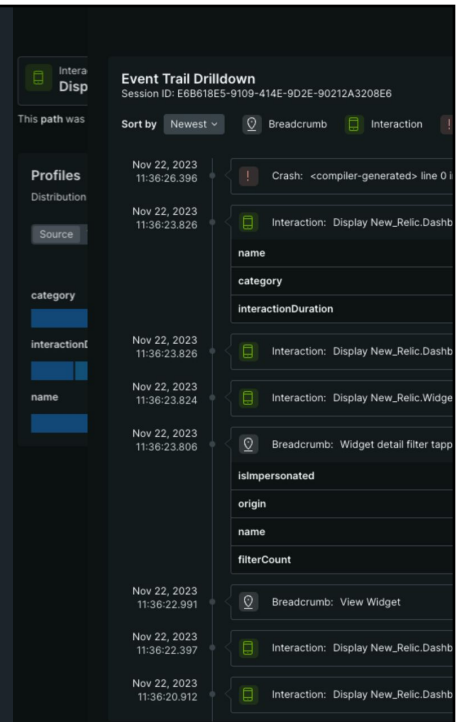

Key capabilities:

- **Monitor iOS and Android performance** with a unified SDK for crash reporting and network analysis.
- **Identify crash root causes** with detailed stack traces and device information sorted by impact.
- **Analyze HTTP request performance** with network waterfall visualizations across different carriers.
- **Monitor app impact** on device battery and CPU usage to optimize resource efficiency.

Resources

- [Mobile - New Relic Documentation](#)
- [New Relic University Course](#)

Synthetics

Key capabilities:

- **Verify critical user paths** with scripted browser monitors that capture screenshots at each step.
- **Test API functionality** with scheduled checks that validate response bodies, headers, and status codes.
- **Deploy monitors inside your network** or specific regions to test internal applications.
- **Set performance thresholds** to receive alerts when availability or response times breach SLAs.

Resources

- [Synthetics - New Relic Documentation](#)
- [New Relic University Course](#)

Alerts

Key capabilities:

- **Pro-active mechanism** for automating detection and notification of changes in your systems' data.
- **Identify anomalies** before they become broader issues.
- **Control who/when** you want to receive notifications about issues
- **Real time alerts and error tracking**
- **Predictive capabilities** to anticipate and respond proactively to possible threshold breaches in the future.
- **Agentic AI Integrations** with tools such as ServiceNow and more

Where to get Help and Support

Finding Support

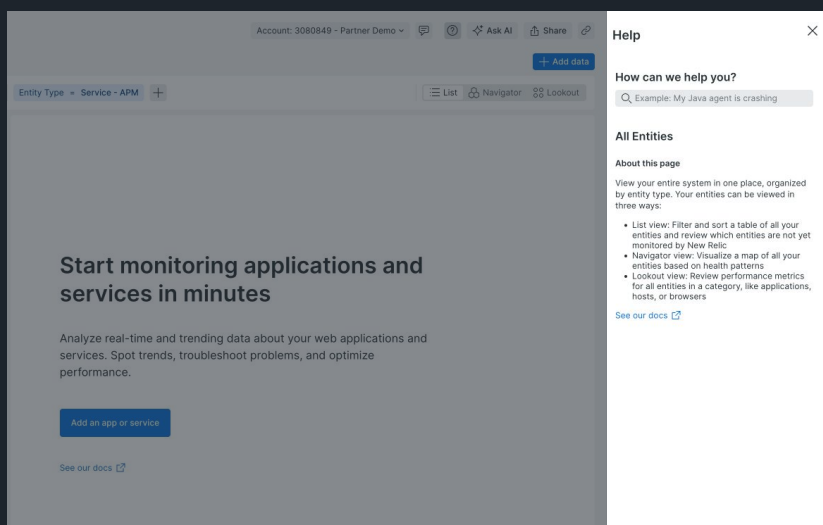

Click on the “?” circle in the top right corner of the New Relic platform (next to the Ask AI button).

This help section includes:

- Federated Search with Relevant Results
- [New Relic Diagnostics Tool](#)
- Discuss in the [Forum](#)
- File a Support Case
- Other Resources

Find help that you need with: Search

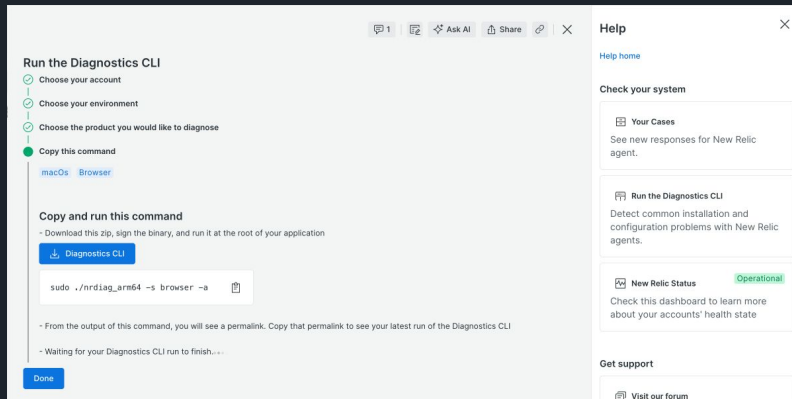

The Help Focus Panel is **contextual** and will provide you with key information about the page that you access it from.

If you seek more information, please use the search bar.

- Type your query in the prompt bar
- Press enter and allow the search to return relevant results

Find installation errors with: **Diagnostics**

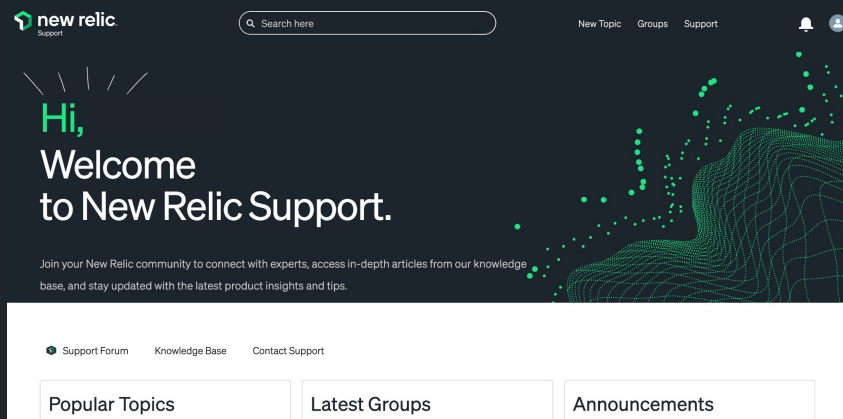

New Relic Diagnostics CLI is a **self-service tool** that can diagnose and resolve issues with your NR products, all from within the platform.

- Detects common installation and config problems with New Relic agents
- First, choose your account, environment, and agent
- Then, copy and run generated command
- Use permalink to review tool run results

© 2025 New Relic, Inc. All rights reserved.

 new relic

Find peer discussions: **Support Forum**

We also welcome you to the New Relic Forum! Post a topic, join a group, or explore new technical solutions with peers.

- [Support.newrelic.com](https://support.newrelic.com)
- Check out Product Announcements
- Search for topics, knowledge base articles, and documentation

Filling out Support Case details

Create Case

Please enter your question or issue *

Looking for data after upgrading agent

Tell us more about your question or issue *

We are missing metrics, based on the what we are seeing it started last week after upgrading.

Here is the query:

SELECT sum(something * 1000) FROM Metric WHERE (entity.guid = 'xxxxxxxxxx') FACET someName LIMIT MAX SINCE 30 minutes ago TIMESERIES UNTIL now

Who would you like to include on this case?

Enter an email and press enter...

What timezone would you like to be contacted in?

Pacific/Niue UTC -11:00

Upload Attachment

Drag and drop or click to upload attachments. Attachment size should be under 2 GB to be uploaded. Limit 10 attachments per response.

Take Screenshot

Permalink URL

Add Permalink

What product or feature is this related to?

Lambda

To submit a case using In-Product support:

- Select “?” icon at the top of screen → Help & Support → Create a Support Case.

For all cases, please provide the following:

- Description of the issue and steps to reproduce.
- Troubleshooting steps already taken.
- Related links, logs and/or data captured.
- Preferred time zone and appropriate priority level.

For critical cases:

- Provide the same details as the standard case above.
- Select “P1 Business Critical” from the priority dropdown.
- Indicate the business impact or security risk.

Upload Attachment

Drag and drop or click to upload attachments.

Attachment size should be under 2 GB to be uploaded. Limit 10 attachments per response.

To submit a case using In-Product support:

- Select "?" icon at the top of screen → Help & Support → Create a Support Case.

The Support Case Builder helps you quickly create a new case by:

1. Including your original question or issue from the prompt bar
2. Confirming your entity
3. Allowing you to provide additional detail, permalinks, and screenshots
4. Run Diagnostics to troubleshoot further
5. Selecting case details such as your timezone, issue severity, to ensure you get proper support
