New Relic Launches Secure Developer Alliance to Scale Security Observability

Business Wire
May 7, 2024 • 6 min read

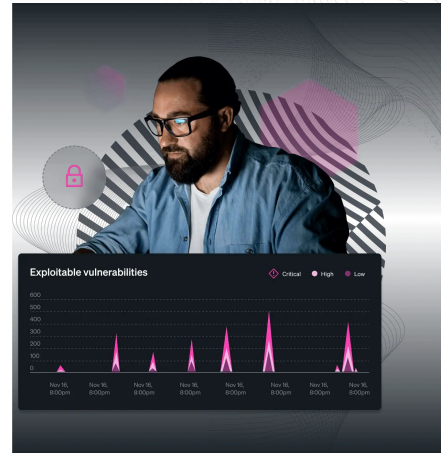

Industry leaders FOSSA, Gigamon, Lacework, Aviatrix, and Opus join alliance to help secure cloud infrastructure, close the gap between security and engineering teams, and ship secure code

<https://finance.yahoo.com/news/relic-launches-secure-developer-alliance-130000128.html>

Security RX alerts (optional)

Configure alerts to receive notifications when new vulnerabilities are discovered

Slack

1. Select **Manage security notifications**
2. Select **Add a Slack**
3. Under **Slack Settings**, select a destination or create one by clicking **+**
4. Under **Slack settings**, select a channel to send your notifications to
5. Under **Notification rules**, configure rules to receive notifications

Webhook

1. Select **Manage security notifications**.
2. Select **Add a Webhook**.
3. Under **Webhook settings**, select a destination or create one by clicking **+**
4. Under **Webhook settings**, create a channel name
5. Under **Notification rules**, configure rules to receive notifications

Where do the third parties fit in?

Third party integrations

Import data from your other security tools directly into New Relic. We currently support the following tools. If your tool isn't listed, send your security data through our [security data API](#).

AWS Security
Hub

Dependabot

Snyk

Trivy

FOSSA

Enrich with pre-existing security tooling you may already have

Security API

Send a JSON POST to:

For the US, <https://security-api.newrelic.com/security/v1>

For EU, <https://security-api.service.eu.newrelic.com/security/v1>

```
curl -X POST https://security-api.newrelic.com/security/v1 \
-H "Content-Type: application/json" \
-H "Api-Key: <New Relic License Key>" \
-d '{
  "findings": [
    {
      "source": "Security Tool Name",
      "title": "Short description of issue",
      "message": "Long form description of the security issue including remediation advice",
      "issueType": "Library Vulnerability",
      "issueId": "Well-known vulnerability identifier like CVE, CWE, CIS, etc.",
      "severity": "CRITICAL",
      "remediationExists": true,
      "remediationRecommendation": "upgrade TheComponent to 1.2.3",
      "detectedAt": "1665610506000",
      "entityType": "Host|Service|Repository|...",
      "entityLookupValue": "a.hostname.com",
      "entityGuid": "ABCDEFGH",
      "customFields": {
        "sourceDetailInfo": "DecadeCoffee",
      }
    }
  ]
}
```

Required fields

source
title
message
issueType
issueID
severity
entityType
entityLookupValue
entityGuid

Best Security Practices

Awareness

Increase security awareness across your entire SDLC by adopting a security mindset

The earlier you catch vulnerabilities, the easier they are to fix

Integrate

Seamlessly integrate data with built-in quickstarts for trusted security tools like Snyk, Lacework, GitHub Dependabot, AWS Security Hub, and Aquasec Trivy

NR Security APIs accept data from any custom source

Vulnerability Alerts

Configure alerts to notify via Slack or webhook when new vulnerabilities are discovered in your application

"Shift" application security tools to **EVERYONE**

New Relic focuses on what Devs, DevOps, SREs, and Security teams need to fix, right now

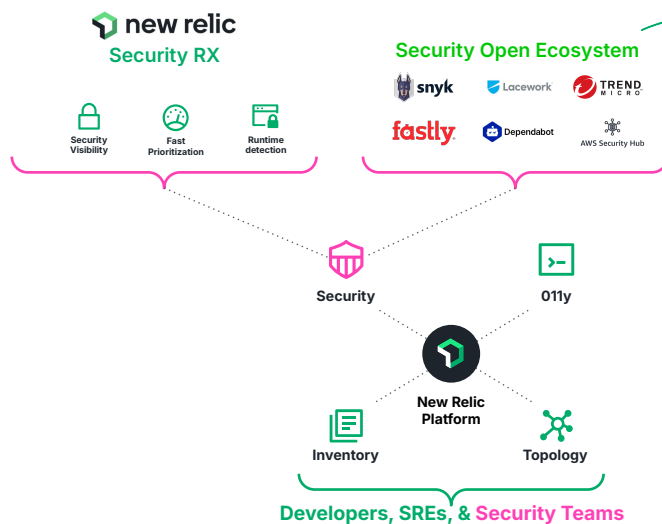

New Relic **seamlessly integrates** our **application topology and inventory** data and your **trusted third party security tools** for security in context so you can:

- **Gain visibility and evaluate** your current security posture across all teams.
- **Prioritize** your security risks for fast remediation.
- Identify the actions required with **runtime detection** to **reduce** risks.
- **Scale** your security practice to work at the speed of business.

© 2025 New Relic, Inc. All rights reserved

Discover **Unified** Security Insights

Integrate your **trusted, best-in-class security tools** with New Relic's **native detection capabilities** and powerful observability platform so you can deliver the **unified security insights** to each engineer, with full-stack context across the development lifecycle.

Summary

- New Relic Security RX works with live telemetry data
- It automatically prioritizes security vulnerabilities and provides actionable steps
- It can send vulnerabilities to ticketing systems, track their resolution and reduce business risk while making security an integral part of every customer's observability strategy
- It works in application runtime to report what libraries are vulnerable and works across all environments in your SDLC
- Security RX now also scans installed packages on supported operating systems
