

Onboarding Webinar

NRU New Relic University

© 2025 New Relic, Inc. All rights reserved.

Objectives

- Start **getting value from New Relic**
- Learn **where to go for more information**

© 2025 New Relic, Inc. All rights reserved.

What can New Relic do for you?

1. Monitor that your website is up and running
2. Notify you if your site is down
3. Troubleshoot application issues

Training account credentials

Log out of other New Relic accounts (or open private browser window)

URL: <https://one.newrelic.com/>

The instructor will provide the email and password

Handout: <https://nru.to/onboarding>

Lab: Create a Synthetics ping monitor

Create an **Availability (Ping)** monitor in the **NRU Training** account to check <https://new-relic.com/> from 3 locations every 5 minutes

Lab: Alert condition and policy

Perform the following tasks in the **NRU Training** account:

1. Go to *Alerts > Alert Conditions* and use **guided mode** to create a Synthetics alert condition that will open a critical incident if the ping monitor you created in the previous lab fails at least once within 5 minutes
2. Add the condition to a new alert policy. Give it a name you will recognize, such as *[Your Name] Policy*

Lab: Workflows and destinations

Perform the following tasks in **NRU Training** account:

1. Select *Alerts > Workflows* and add a workflow
2. Give it a name you will recognize, such as *[Your name] workflow*
3. Under **Filter data**, create a Basic or Advanced filter that matches your Synthetics alert condition
4. Under **Notify**, select *Email* and enter your email address
5. *Optional*: Click *Test workflow*. Did you receive an email?
6. Click the *Activate workflow* button in the lower-right corner

Lab: Explore the APM service summary page

The Service Summary page in APM is a set of curated charts to help you diagnose issues and follow links to delve deeper into related metrics, and troubleshoot the problem. Explore this page for a service and answer the questions below:

1. How can you change the time range displayed on the charts?
2. How can you learn what each chart means?
3. How can you see where the application is spending the most time?
4. How can you view the slowest transactions?
5. How you investigate errors?

Lab: Troubleshoot an APM performance issue

Find the **Ad Service** in the **NRU Demotron v4** account. Set the time window to the past 60 minutes. Notice that there are several response-time spikes in the past hour.

Follow the steps at

<https://docs.newrelic.com/docs/tutorial-improve-app-performance/root-causes/#identify> to investigate the response-time spikes.

Next Steps

Complete the Online Courses

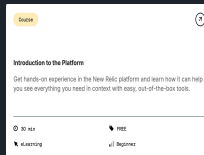

Post course Activity

> Complete these 3 courses in the next **two weeks**:

[Introduction to the Platform](#)

(30 mins)

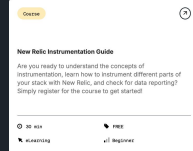

1

[New Relic Instrumentation Guide](#)

(30 mins)

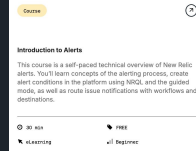

2

[Introduction to Alerts](#)

(30 mins)

3

> Completion Tracking

> Access to Q&A sessions after completion

> Do you want to learn more? Get Certified ! Take the New Relic University online courses:
